البحث عن الدراسات السابقة

مراجعة الدراسات السابقة

مراجعة الدراسات السابقة:

هي طريقة منهجية لتحديد وتقييم وتفسير الدراسات السابقة في المجال البحثي قيد الدراسة.

لماذا؟

لمعرفة ما تم التوصل إليه و ما هي المشاكل القائمة في ذلك المجال.

أين؟

Identification of the molecular basis of doxorubicin induced cardiotoxicity

Sui Zhang, Xiaobing Liu, Tasneem Bawa-Khalfe

Doxorubicin is believed to cause dose-dependent cardiotoxicity through redox cycling and the generation of reactive oxygen species (ROS). Here we show that cardiomyocyte-specific deletion of Top2b (encoding topoisomerase- β) protects cardiomyocytes from doxorubicin-induced cardiotoxicity.

The taste of cutlery: how the taste of food is affected by the weight, size, shape, and colour of the cutlery used to eat it

Vanessa Harrar¹ and Charles Spence

Abstract

Background: Recent evidence has shown that changing the plateware can affect the perceived taste and flavour of food, but very little is known about visual and proprioceptive influences of cutlery on the response of consumers to the food sampled from it. In the present study, we report three experiments designed to investigate whether food tastes different when the visual and tactile properties of the plastic cutlery from which it is sampled are altered. We independently varied the weight, size, colour, and shape of cutlery. We assessed the impact of changing the sensory properties of the cutlery on participants' ratings of the sweetness, saltiness, perceived value,

Editor Lookup

"From a scientist to a fellow scientist."

Welcome to Editor Lookup, a free efficient search tool to help find scientific professionals for academic tasks, such as editors and reviewers for scientific manuscripts!

Using Editor Lookup is easy:

- Enter the names of the persons you are considering in the Authors field, on separate lines
- In the Keywords field, enter relevant keywords, also on separate lines
- The Keywords field supports the same field-specific searches as Entrez PubMed (for example, "[title]")
- The tool will then form a fully-sortable table, where you can see how many PubMed hits each candidate has with each keyword.
